UL 2849 TEST REPORT

Standard: <u>ANSI/CAN/UL 2849-2022A</u>			
Report No.:	WUX202308074101UL	Client:	Huizhou Xingqishi Sporting Goods Co. LTD
Product:	Electric Bike	Rated data:	Adaptor: 100V-240V~ 2.5A(Max) 50/60Hz Output: DC 54.6V --- 3.0A
Project Engineer:	Tony Bi		
Test Engineer:	Candy Zheng	Protection class	--
Application Date	August 07, 2023	Protection against moisture:	Min. IP44
Requested Date	August 11, 2023	Construction:	With battery
Re-test	☐	Operation mode	Continuous
Full-test	☒	Weight:	> 10kg
Tested Model :	E26	Sample No.	1#
Should the heating test be done in heating oven?	☐ Yes °C ☒ No		
Altitude during operation (m)	☐ Up to 2000 ☒ No		
Altitude of test laboratory (m)	☒ below 2000 ☐ No		
Other information:.....	Outdoor used, Battery, With over charge protection, Over discharge protection, over current protection and temperature protection.

INPUT TEST (27)

Method:

EUT is operating at: $U=U_n$, $F=F_n$.

Load of the EUT is under maximum normal load.

The input current and wattage to the EUT shall be measured.

Multiple rated voltages or rated voltage range, each rated voltage shall be measured.

The current and power shall be taken under steady state conditions.

Result:

Temperature Test (28)

Method:

EUT primary is $U=U_n$, $F=F_n$, operated under normal max. load.

Temperatures of parts are measured by thermal couplers, windings are measured by resistance change method.

Measuring place shall be a point close to the heat source.

The test is continued until thermal stable.

Voltage is changed lower or higher tolerance without rest of time.

**Isolation Resistance Test (29)****Method:**

The test is made while the EUT is still in well-heated condition

Make sure the power switch of the EUT is in ON position.

Thin material can be tested in room temperature.

The test voltage is d.c. 500 voltage

Test voltage is applied gradually raised from zero to the specified voltage and held at that value for 60s.

Dielectric Strength Test (30)

Method:

The test is made while the EUT is still in well-heated condition

Make sure the power switch of the EUT is in ON position.

Thin material can be tested in room temperature.

The test voltage is a.c. of 50 or 60 Hz or d.c. voltage equal to peak value of the a.c. voltage.

Test voltage is applied gradually raised from zero to the specified voltage and held at that value for 60s.

Insulation breakdown is: Current flows through the insulation rapidly increases in an uncontrolled manner; that is the insulation does not restrict the flow of the current.

Corona discharge or a single momentary flashover is not regarded as insulation breakdown.

A test incorporating reinforced insulation and lower grades insulation (BI, SI), care is taken not to overstress BI or SI.

Where capacitors (X or Y capacitors) are across the insulation, d.c. voltage is recommended for the test.

Discharge resistors shall be disconnected before testing.

Ingress Protection Tests (36)

Test procedure

For IPX4, the sample is positioned under oscillating spray tubes rotating at nearly $\pm 180^\circ$ from the vertical for 10 minutes. The oscillation rate is two cycles of about 360° in 12 seconds. Each surface of the enclosure within the spray arch is to be tested for 1 min/m², with no less than 5 minutes of total test time. The flow rate again depends upon the tube size, Withstand voltage test is pass, No harmful effects
